Shuttle lift Motor 551-13578-00

Details

The Mattson Shuttle lift motor has been very hard to get hold of and no alternative was readily available.

This brand new motor can replace the original motor without any alterations.

Improved performance: The increased voltage in the new motor winding can lead to improved performance, such as more consistent power delivery, and better torque output.

Increased efficiency: The new motor's increased efficiency can result in less energy consumption, cooler running temperatures, and longer lifespan.

Easy installation: The new motor is designed to be plug and play and has the same size for installation, making it easy to swap out the old motor without any modifications or special tools.

Guaranteed quality: The new motor is from the original manufacturer, ensuring that it meets the same high standards as the original motor and is reliable.

Compatible with existing systems: The new motor is designed as a replacement for the old motor, making it fully compatible with any existing systems that were designed to work with the old motor, making it an easy and seamless upgrade.

Benefits

- Plug and Play installation
- Very reliable up-grade
- All cables and power supply included
- Installation procedure available
- Installation on-site available
- Technical support available
- Spares and repairs available
