**Quick fit Faraday Cage Clamp  
Part Number 303-21127-JVT****Details**

Introducing the Upgraded Faraday Clamp for Swift Installation

Experience the enhanced capabilities of the Mattson Aspen II system with our innovative Faraday Clamp. Unlike its predecessor, which required the precision of four small screws to secure the faraday cage, this new version presents a seamless installation process.

Say goodbye to the struggles of accessing those hard-to-reach screws, which could lead to complications if the allen key head wears out. The New Large Robust Clamps offer a solution that harnesses the existing screw threads on the top plate, saving you both time and frustration.

Removing and reinstalling the two inner screws of the faraday cage clamps has never been easier, thanks to the Quick Fit Faraday Cage Clamp. With the use of 2x 5/16 x 1.125 in. long screw, the clamps remain firmly in place, offering unwavering security.

Moreover, the Quick Fit Faraday Cage Clamp caters to all faraday cage types, whether it's ICP, ICPsm, or LiteEtch configurations. Elevate your system's efficiency and convenience with this latest advancement in installation technology.

**Benefits**

- Plug and Play installation
- Very reliable up-grade
- Effortless Setup
- Sturdy and Resilient Design
- Technical support available
- Compatibility with Various Cage Types
- Time-Economizing Solution
- Convenient Access
- Suitable for ICP, ICPsm, LiteEtch
